

OUR VISION

The VCHS Board is committed to installing heat and cooling (HVAC system) for the 2nd and 3rd floor display rooms of the Museum. This is the minimum project needed to make the Museum a true 12 month operation.

The total cost is \$125,000, with approx. \$32,000 already in the HVAC fund. The VCHS needs to raise an additional \$93,000 to complete this air-to-air heat pump system.

Insulating the attic is also included in the total cost. The plan is to begin the installation by mid-summer 2025 providing the funds have been raised.
